### **Custom Made Wet Room Flooring Solutions for Voyage Care**

**On The Level first started supplying Voyage Care around five years ago when, having experienced problems with slow water drainage in some showers, the company asked On The Level to design a solution to stop water flowing into other areas of the bathroom.**

On The Level is an expert in the design and manufacture of custom-made shower formers which exceed normal stock shapes and sizes. The custom-made formers created for Voyage Care projects to solve the excess water problem, cover the entire bathroom. These “complete wet floors” were designed and precision engineered with a gradient running across the entire area towards the gully outlet, solving the problem of water escaping from the shower areas. The complete wet floor was then covered with an anti-slip vinyl sheet floor.

James Clark, Managing Director at On The Level says, “Working with Voyage Care is always an absolute pleasure. We suggested the idea of designing a complete wet floor for their bathrooms because quite often, when a user is showering who needs assistance, water can splash outside the showering zone resulting in water flowing everywhere. By having a gradient over the entire bathroom floor the possibility that water will run in the opposite direction to where it should be going – the drain - is drastically reduced. We have worked with Voyage care on a number projects and we look forward to working with them in the future”
